Bilharzia is endemic in the east and so swimming in untreated water can be dangerous. Tick bite fever can be a problem when walking in grass and travellers should be aware that the incidence of AIDS is high throughout Southern Africa.

Private medical services in South Africa are of a very high standard, however the availability of the services is restricted to the main towns and emergency evacuation from remote areas may attract high costs. An insurance service for tourists is available from rescue companies providing coverage for emergency transport.
